

GANTRY VIEW SCHOOL

Long Island City, New York

Description

School is in Session! Ryan Soames Engineering is excited to be a part of creating a new space for learning at the Gantry View School, a K-8th grade independent school in the heart of Long Island City, NY. The original room was previously workshops with offices above and was entirely demolished to accommodate the new architectural design including a rooftop outside play area, classrooms, offices, and support spaces. The project included all new utility services to the space. RSE worked closely with VOREA Group to provide MEP-FP engineering to meet the tight deadlines for the first day of classes.
