

CHURCH OF THE EPIPHANY

Upper East Side, New York, NY

Description

Upon purchasing the former Jan Hus Presbyterian Church and Neighborhood House, the Church of the Epiphany partnered with Acheson Doyle Partners Architects and Ryan Soames Engineering for a comprehensive historic restoration and renovation project. This historic renovation includes adaptive reuse and a complete interior renovation accommodating a mixed-use church, office, industrial kitchen, school, gymnasium and accessible roof program.

The Sanctuary renovation features a new organ and stained glass windows, integration of existing liturgical fixtures into the space, introduction of a new dedicated HVAC system and Landmarks Preservation Commission-approved exterior repairs and restoration.

Ryan Soames was responsible for the full mechanical, electrical, plumbing, sprinkler and fire alarm design for the project and coordination with the architect and contractors for the systems to be incorporated into the existing structure and restraints.
