

MUSEUM OF SEX

Miami, FL

Description

Ryan Soames Engineering was retained to convert the existing 32,000 square foot storage warehouse with mezzanine into the new Museum of Sex, as the institution's most ambitious undertaking to date. RSE in collaboration with the project team coordinated all the new mechanical, electrical, plumbing and fire protection systems. This included a whole new mechanical system and utility services for the museum's three large interactive exhibition galleries, retail space, bar and office areas.
