

# PRIVATE FITNESS CLUB

Hoboken, NJ

## **Description**

Ryan Soames Engineering, in collaboration with 222 East Society have designed the layout and overall aesthetic of the future fitness club in Hoboken, NJ.

The interior concept concentrated on developing a modern + sophisticated aesthetic that not only incorporated the company's black/white brand but exemplified their love of minimalism. The sincere focus on creating spaces that celebrated BODY and MIND—devoid of any distractions in the workout space was key for the installation.

Existing concrete floors and ceilings are celebrated in primary public and service areas whereas special detailing and acoustic treatment was instituted inside the cycling and dance/hitt studios to ensure the gym's neighbors in adjacent residential + commercial areas would not be disturbed.

Ryan Soames Engineering have supported the Architect and Client's vision in the design of the Mechanical, Electrical, Plumbing, Sprinkler and Fire Alarm systems and use of existing building infrastructure as well as the provision of additional mechanical/HVAC systems to support the spaces and their function.
